01 | Overall case and closure

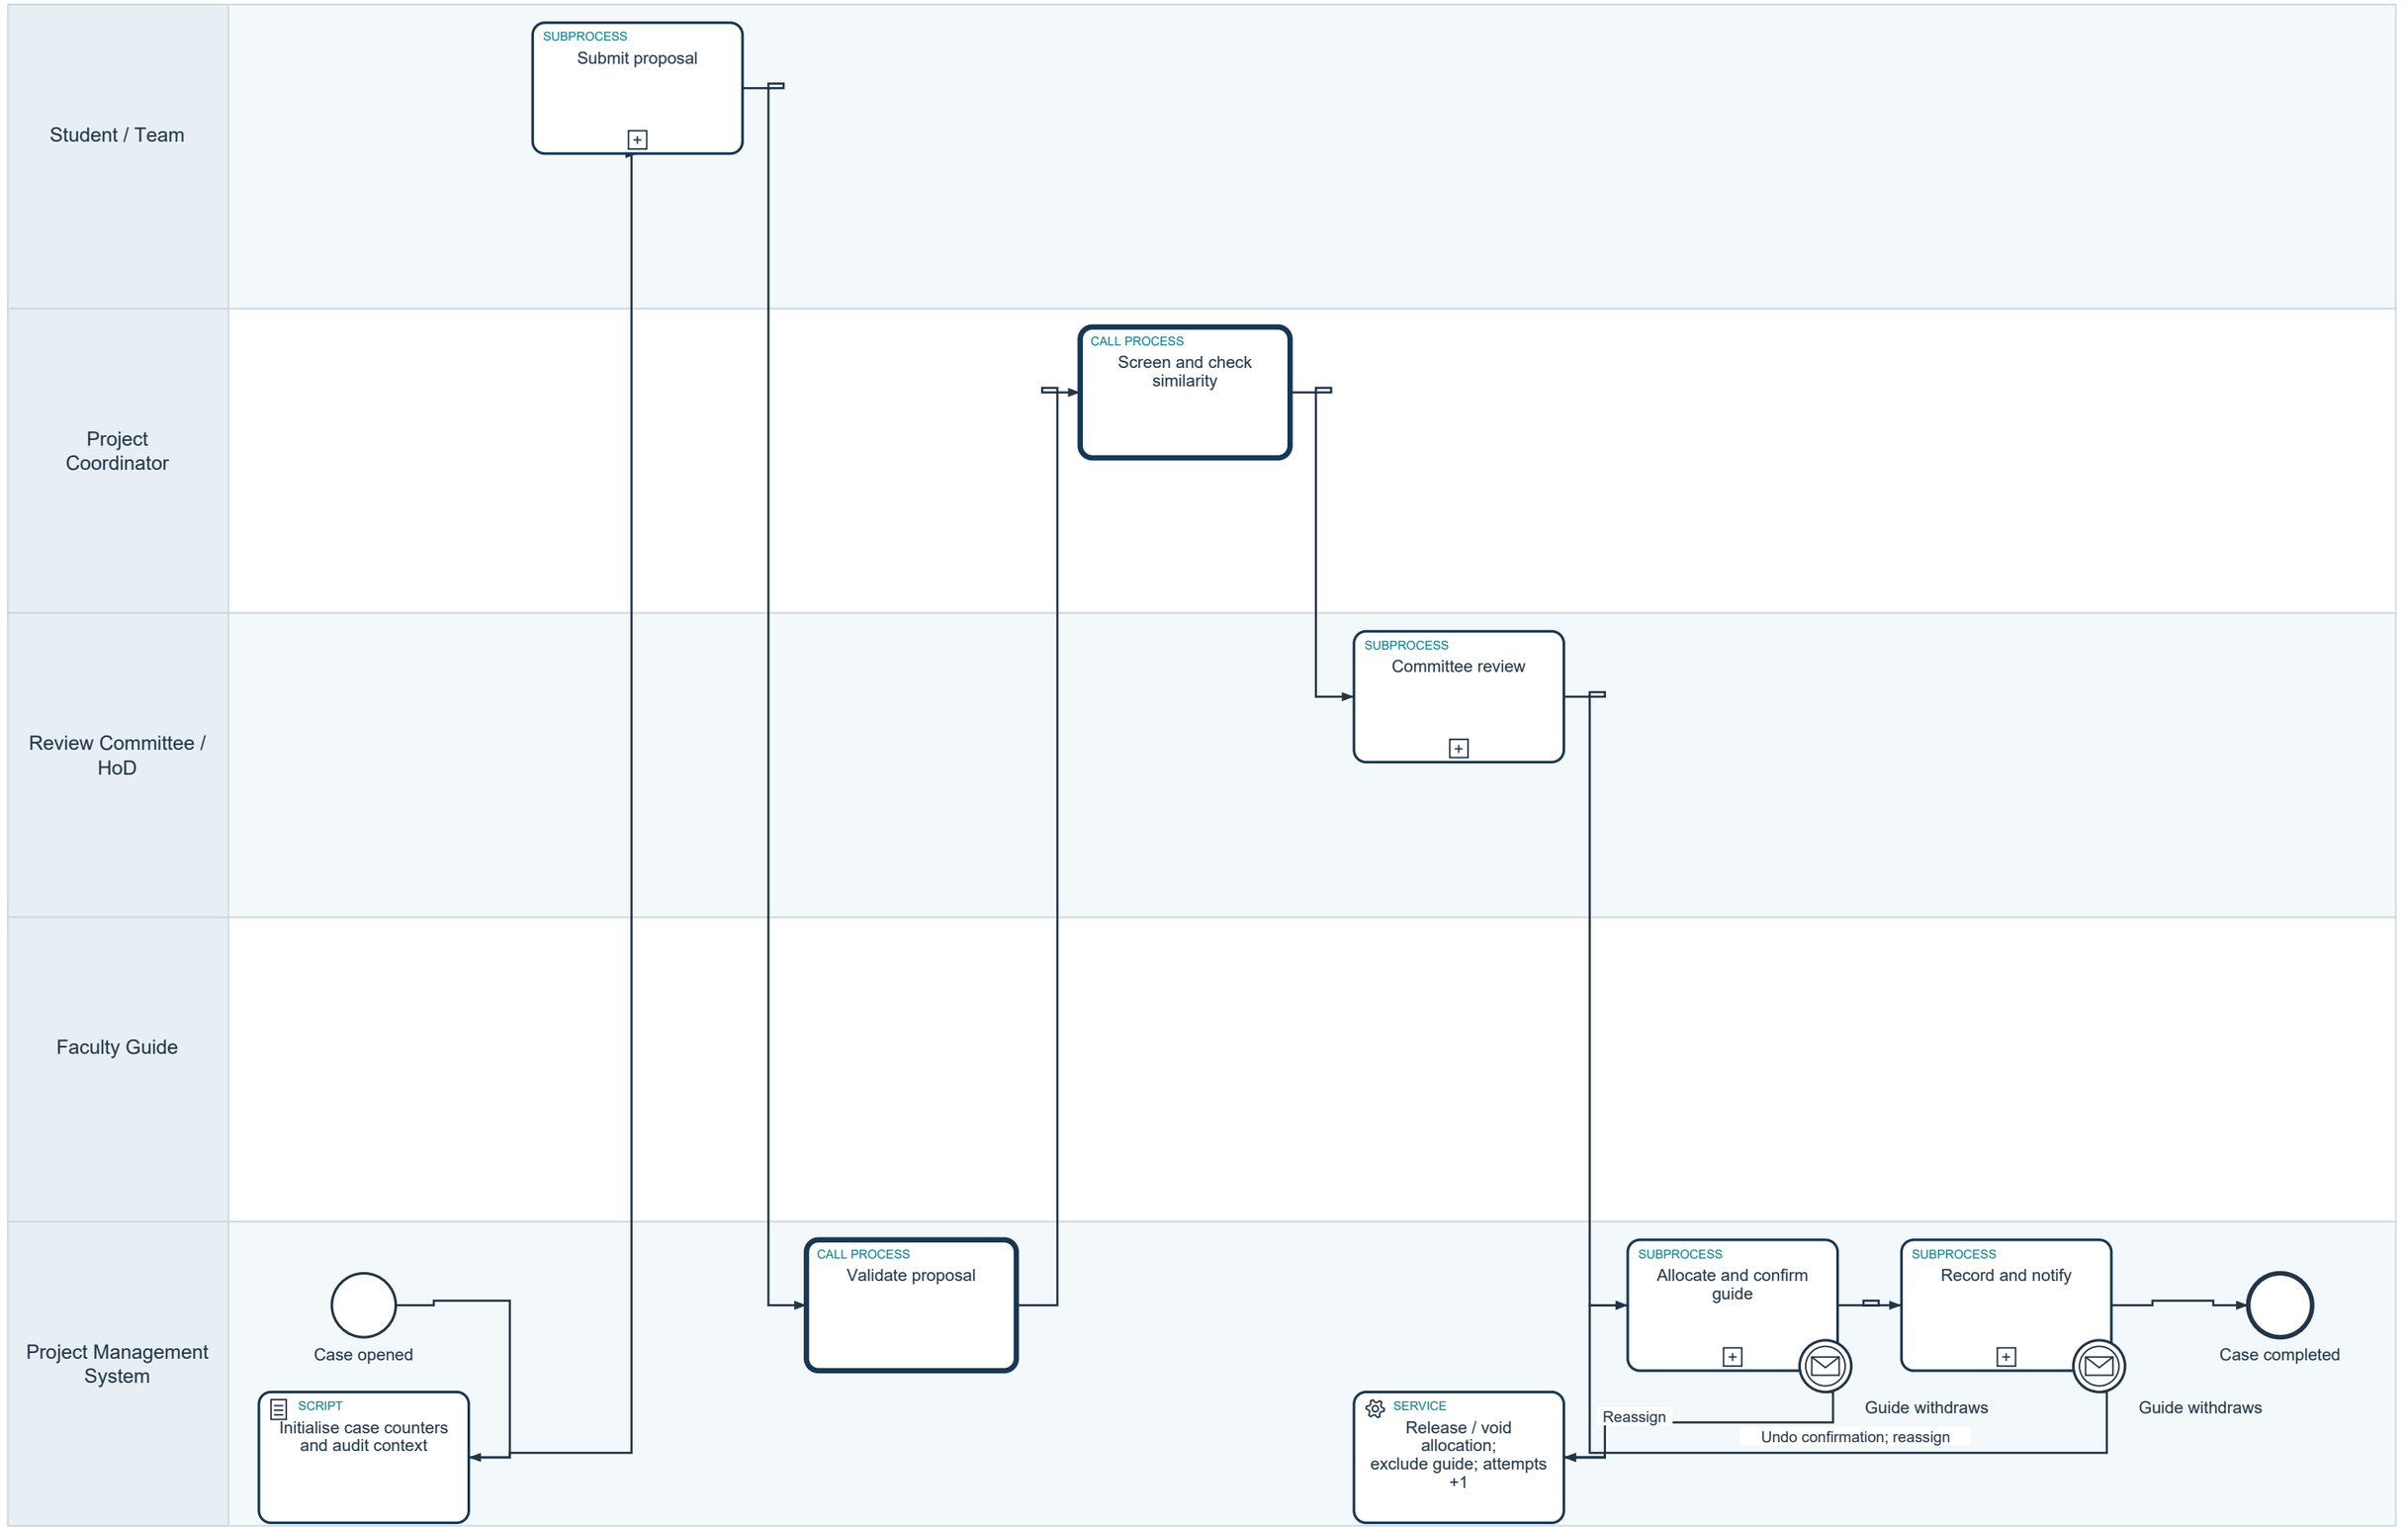

BPMN 2.0 | One department process, five responsibility lanes | Policy values are modelling assumptions

X = exclusive decision + = parallel split/join Double circle = intermediate/boundary Lightning = error << = compensation

02 | Approval case - happy path and recovery

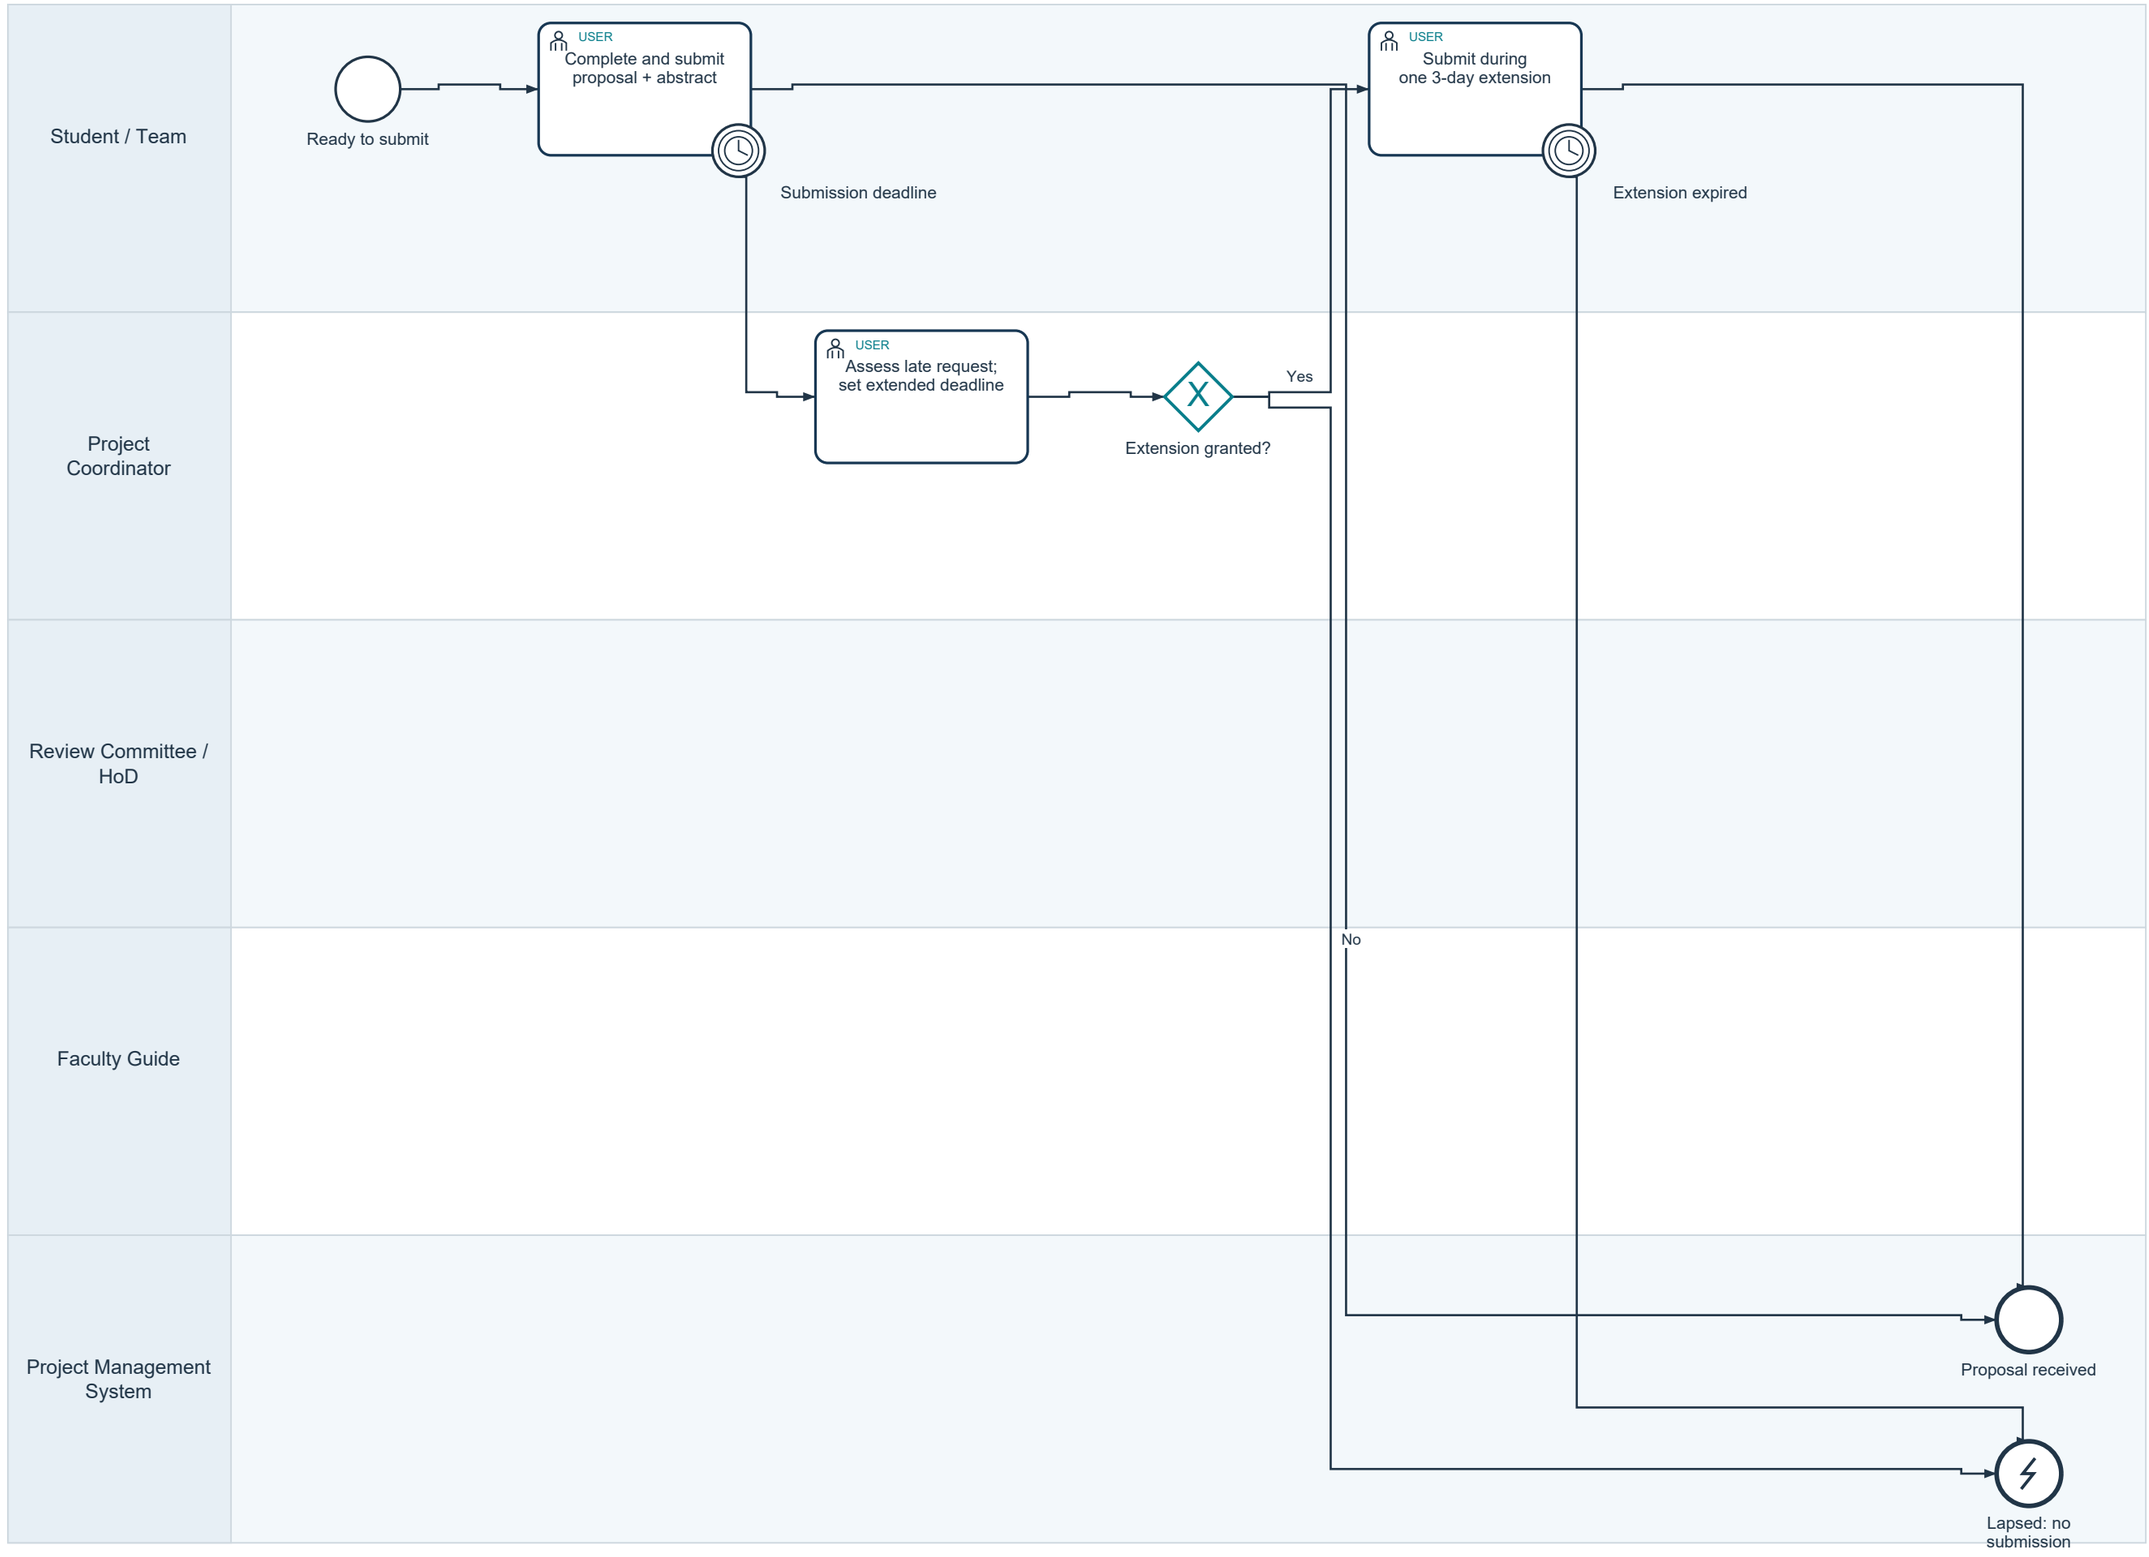

BPMN 2.0 | One department process, five responsibility lanes | Policy values are modelling assumptions

X = exclusive decision + = parallel split/join Double circle = intermediate/boundary Lightning = error << = compensation

03 | Submission and deadline

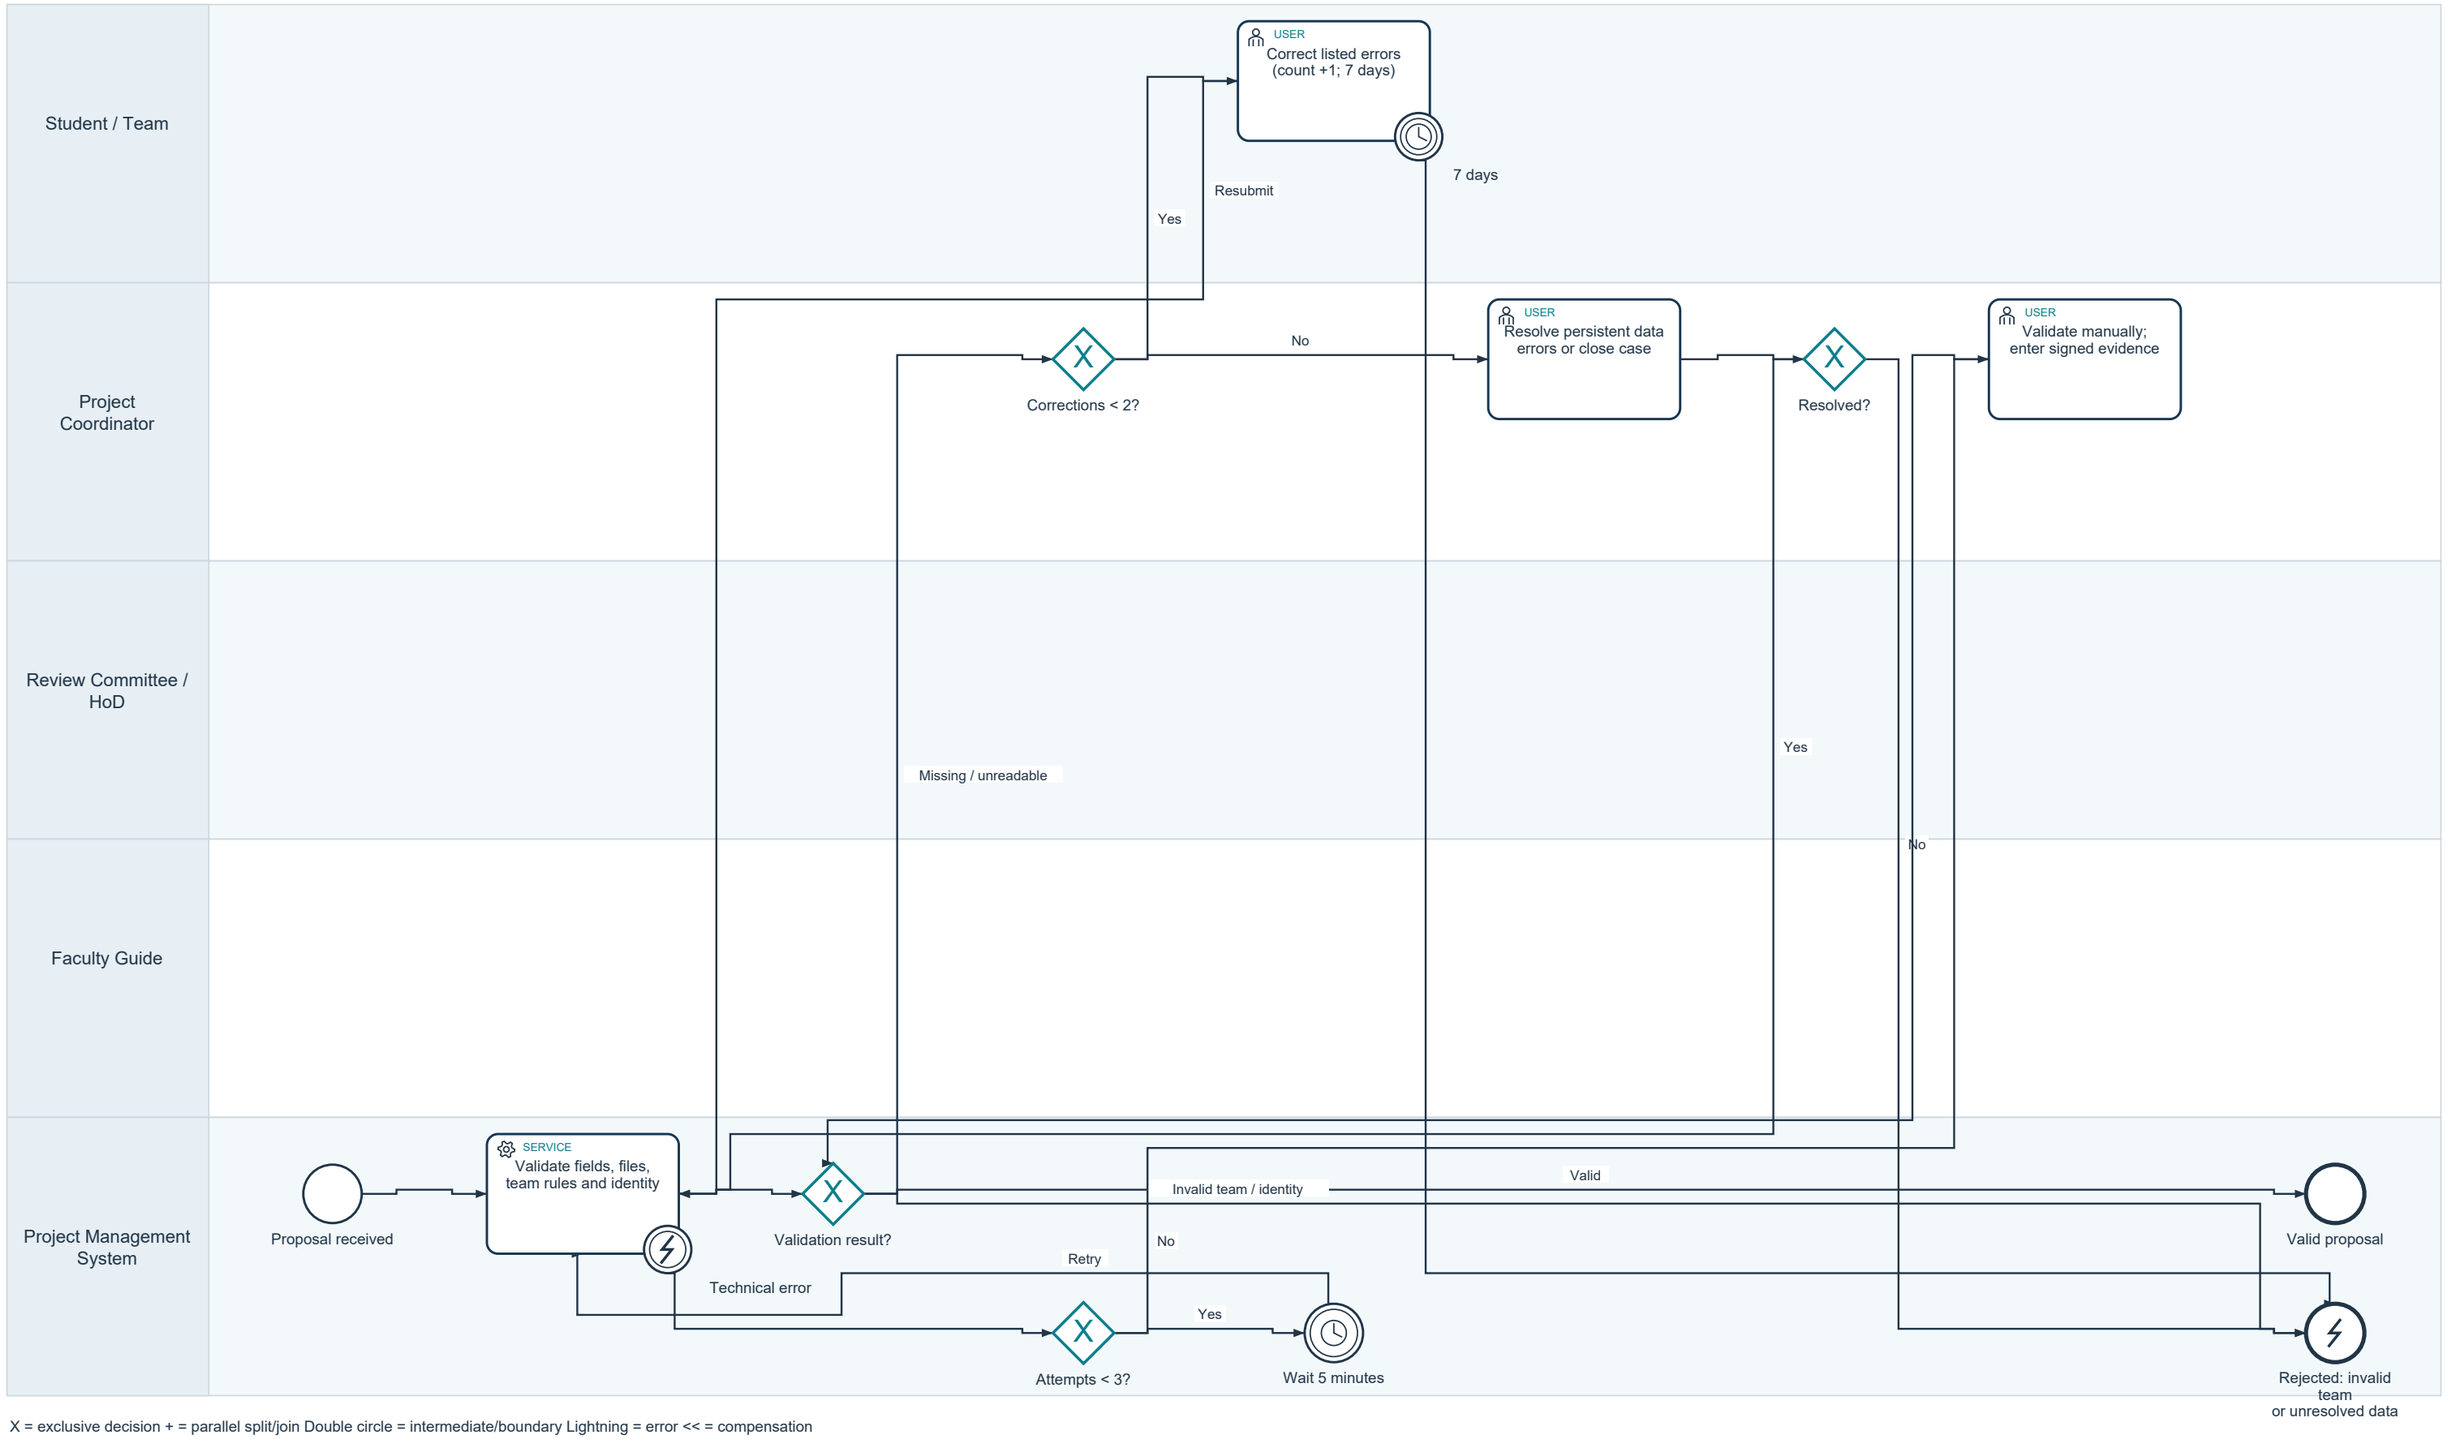

BPMN 2.0 | One department process, five responsibility lanes | Policy values are modelling assumptions

X = exclusive decision + = parallel split/join Double circle = intermediate/boundary Lightning = error << = compensation

04 | Validation, correction and technical recovery

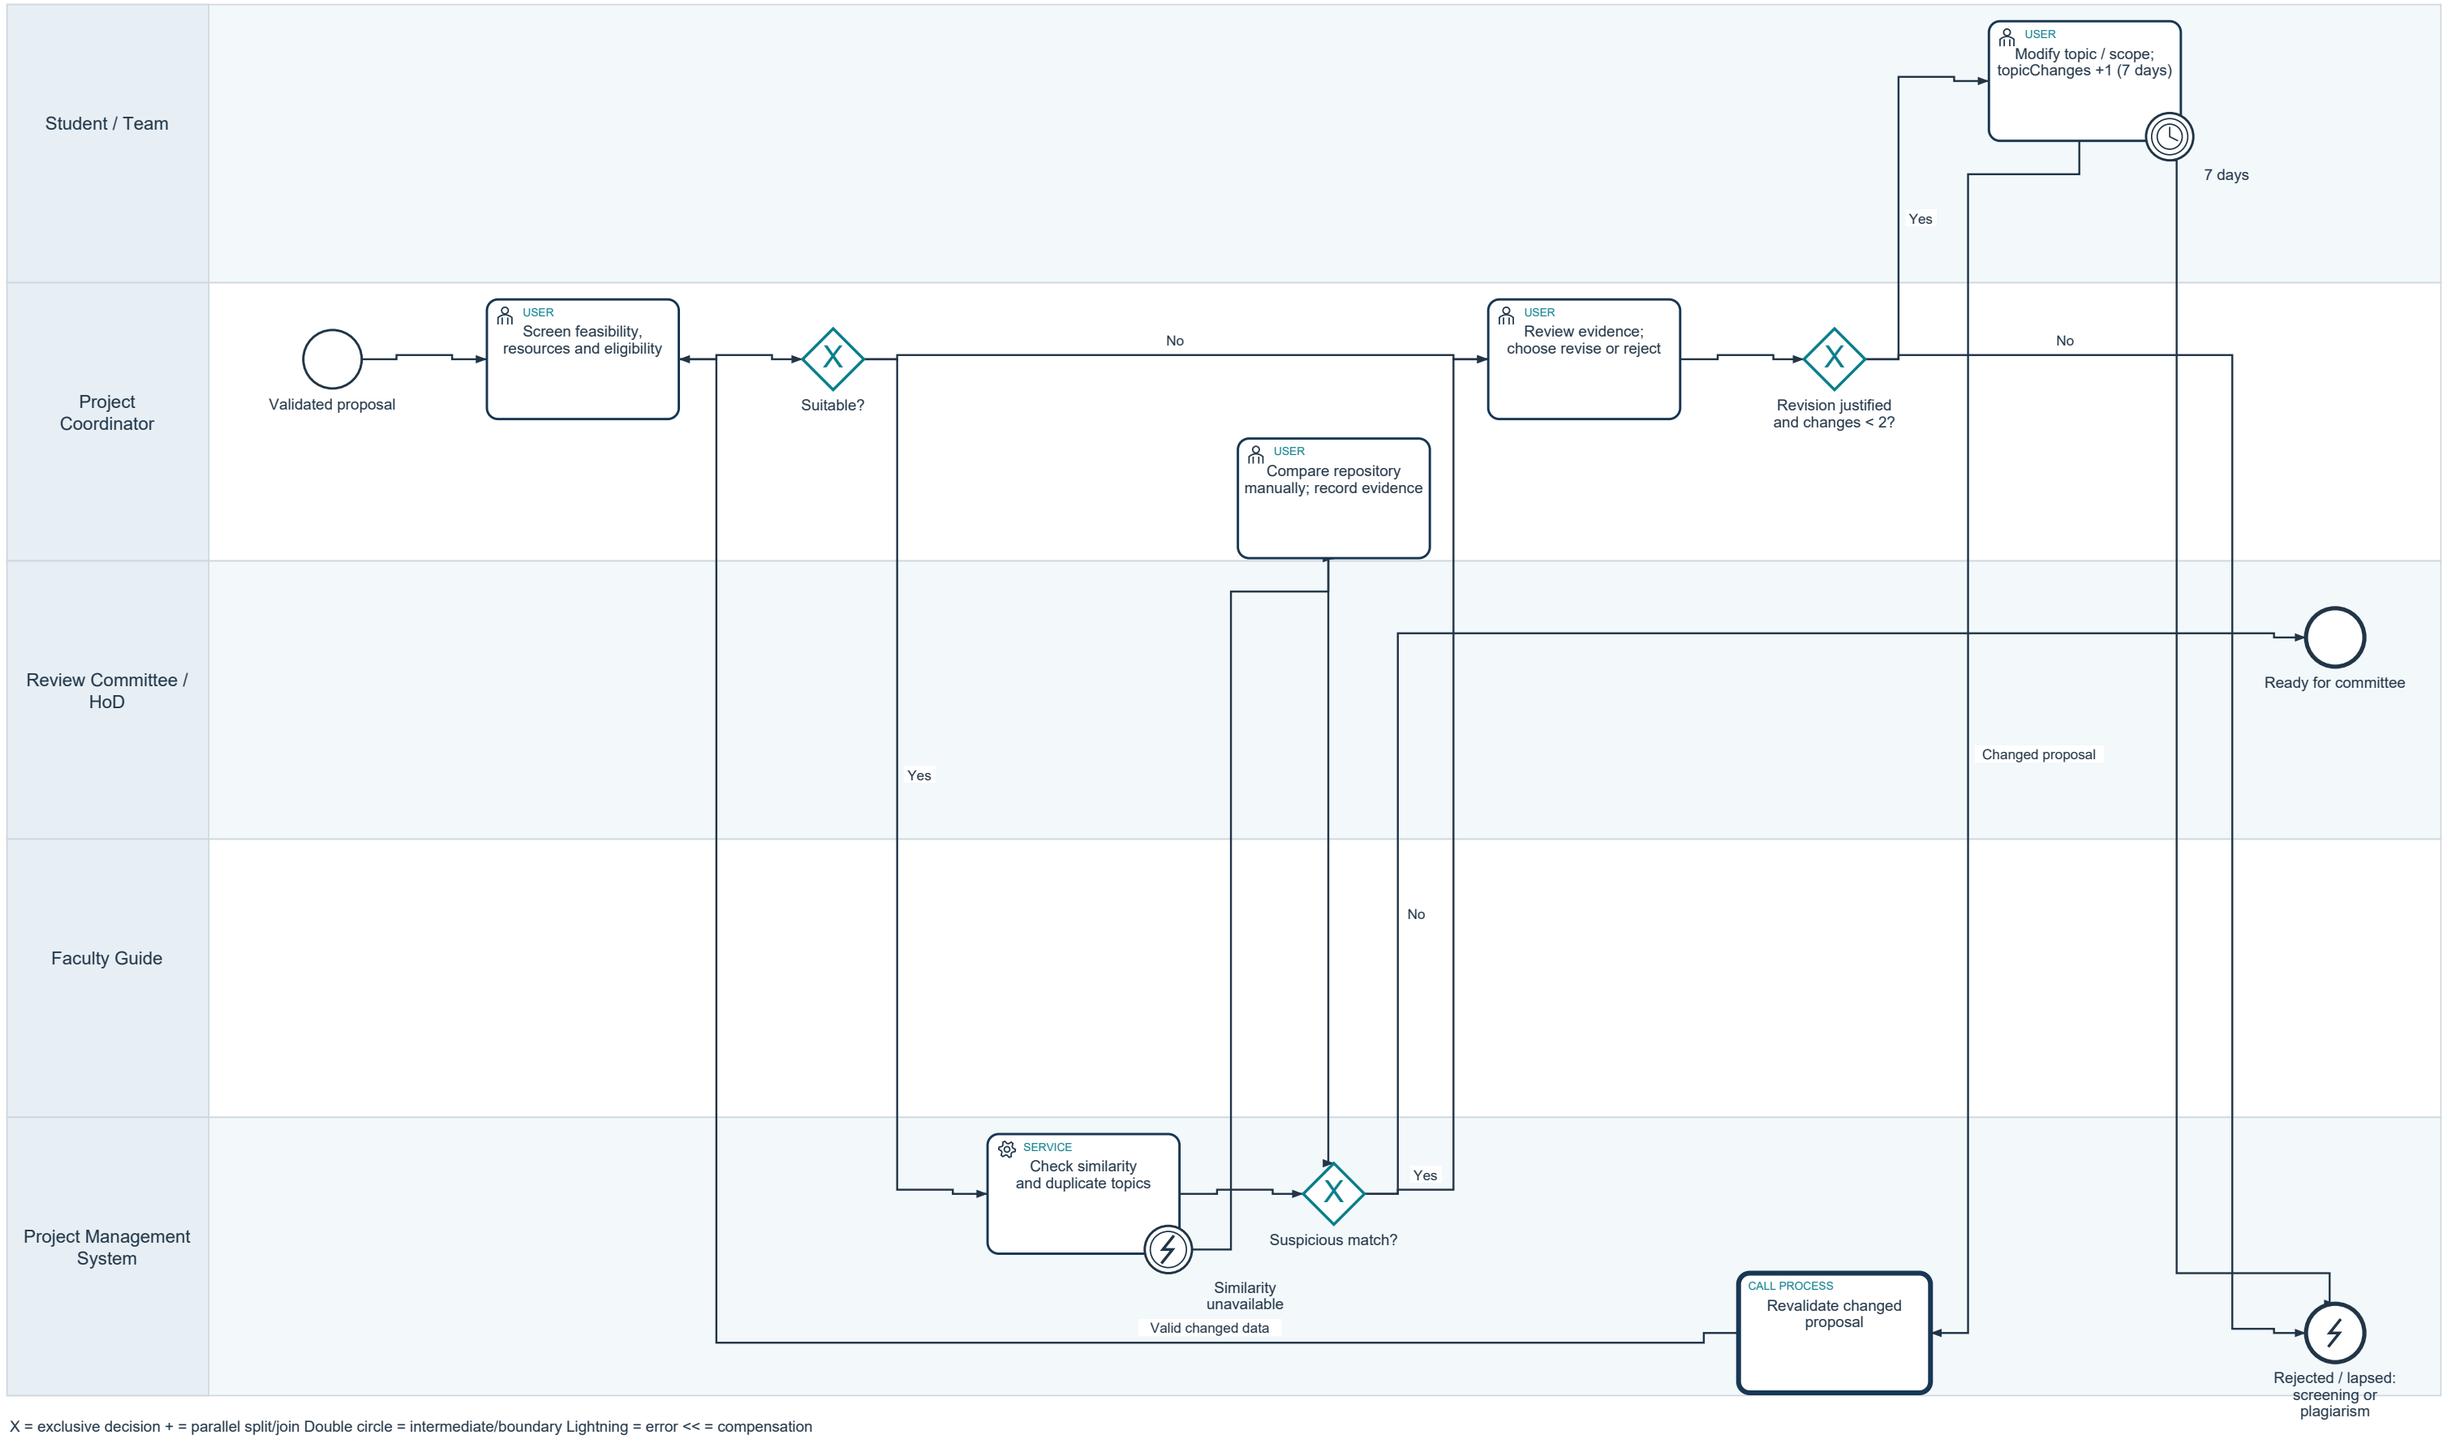

BPMN 2.0 | One department process, five responsibility lanes | Policy values are modelling assumptions

X = exclusive decision + = parallel split/join Double circle = intermediate/boundary Lightning = error << = compensation

05 | Screening and similarity / topic changes

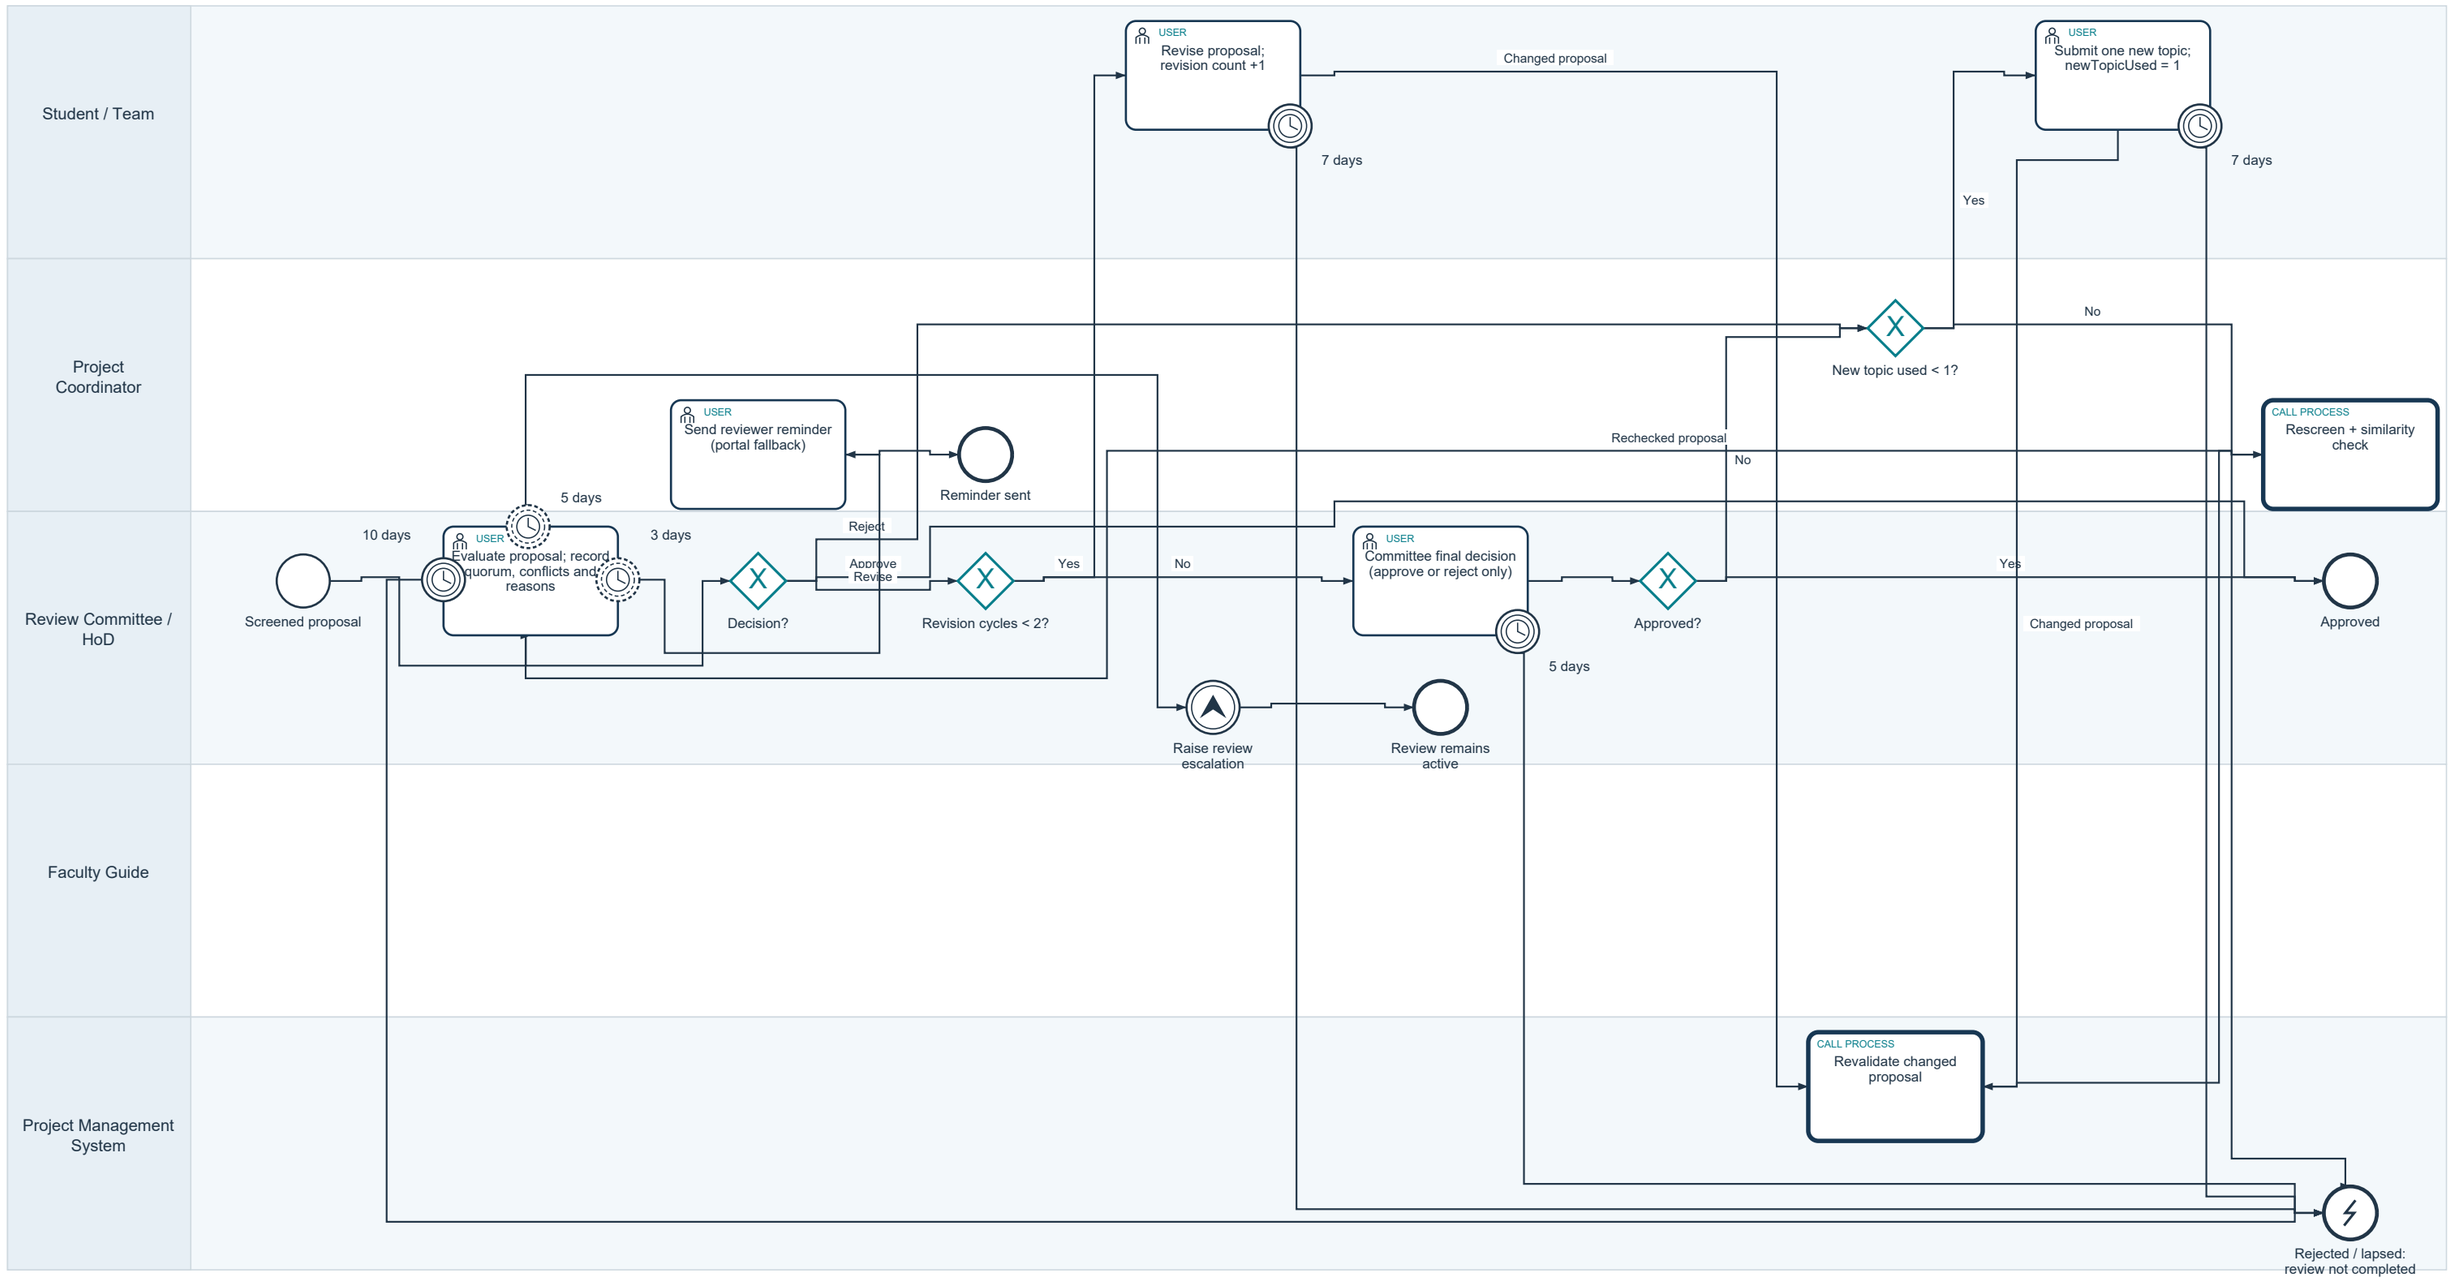

BPMN 2.0 | One department process, five responsibility lanes | Policy values are modelling assumptions

X = exclusive decision + = parallel split/join Double circle = intermediate/boundary Lightning = error << = compensation

06 | Committee decision, revisions and review SLA

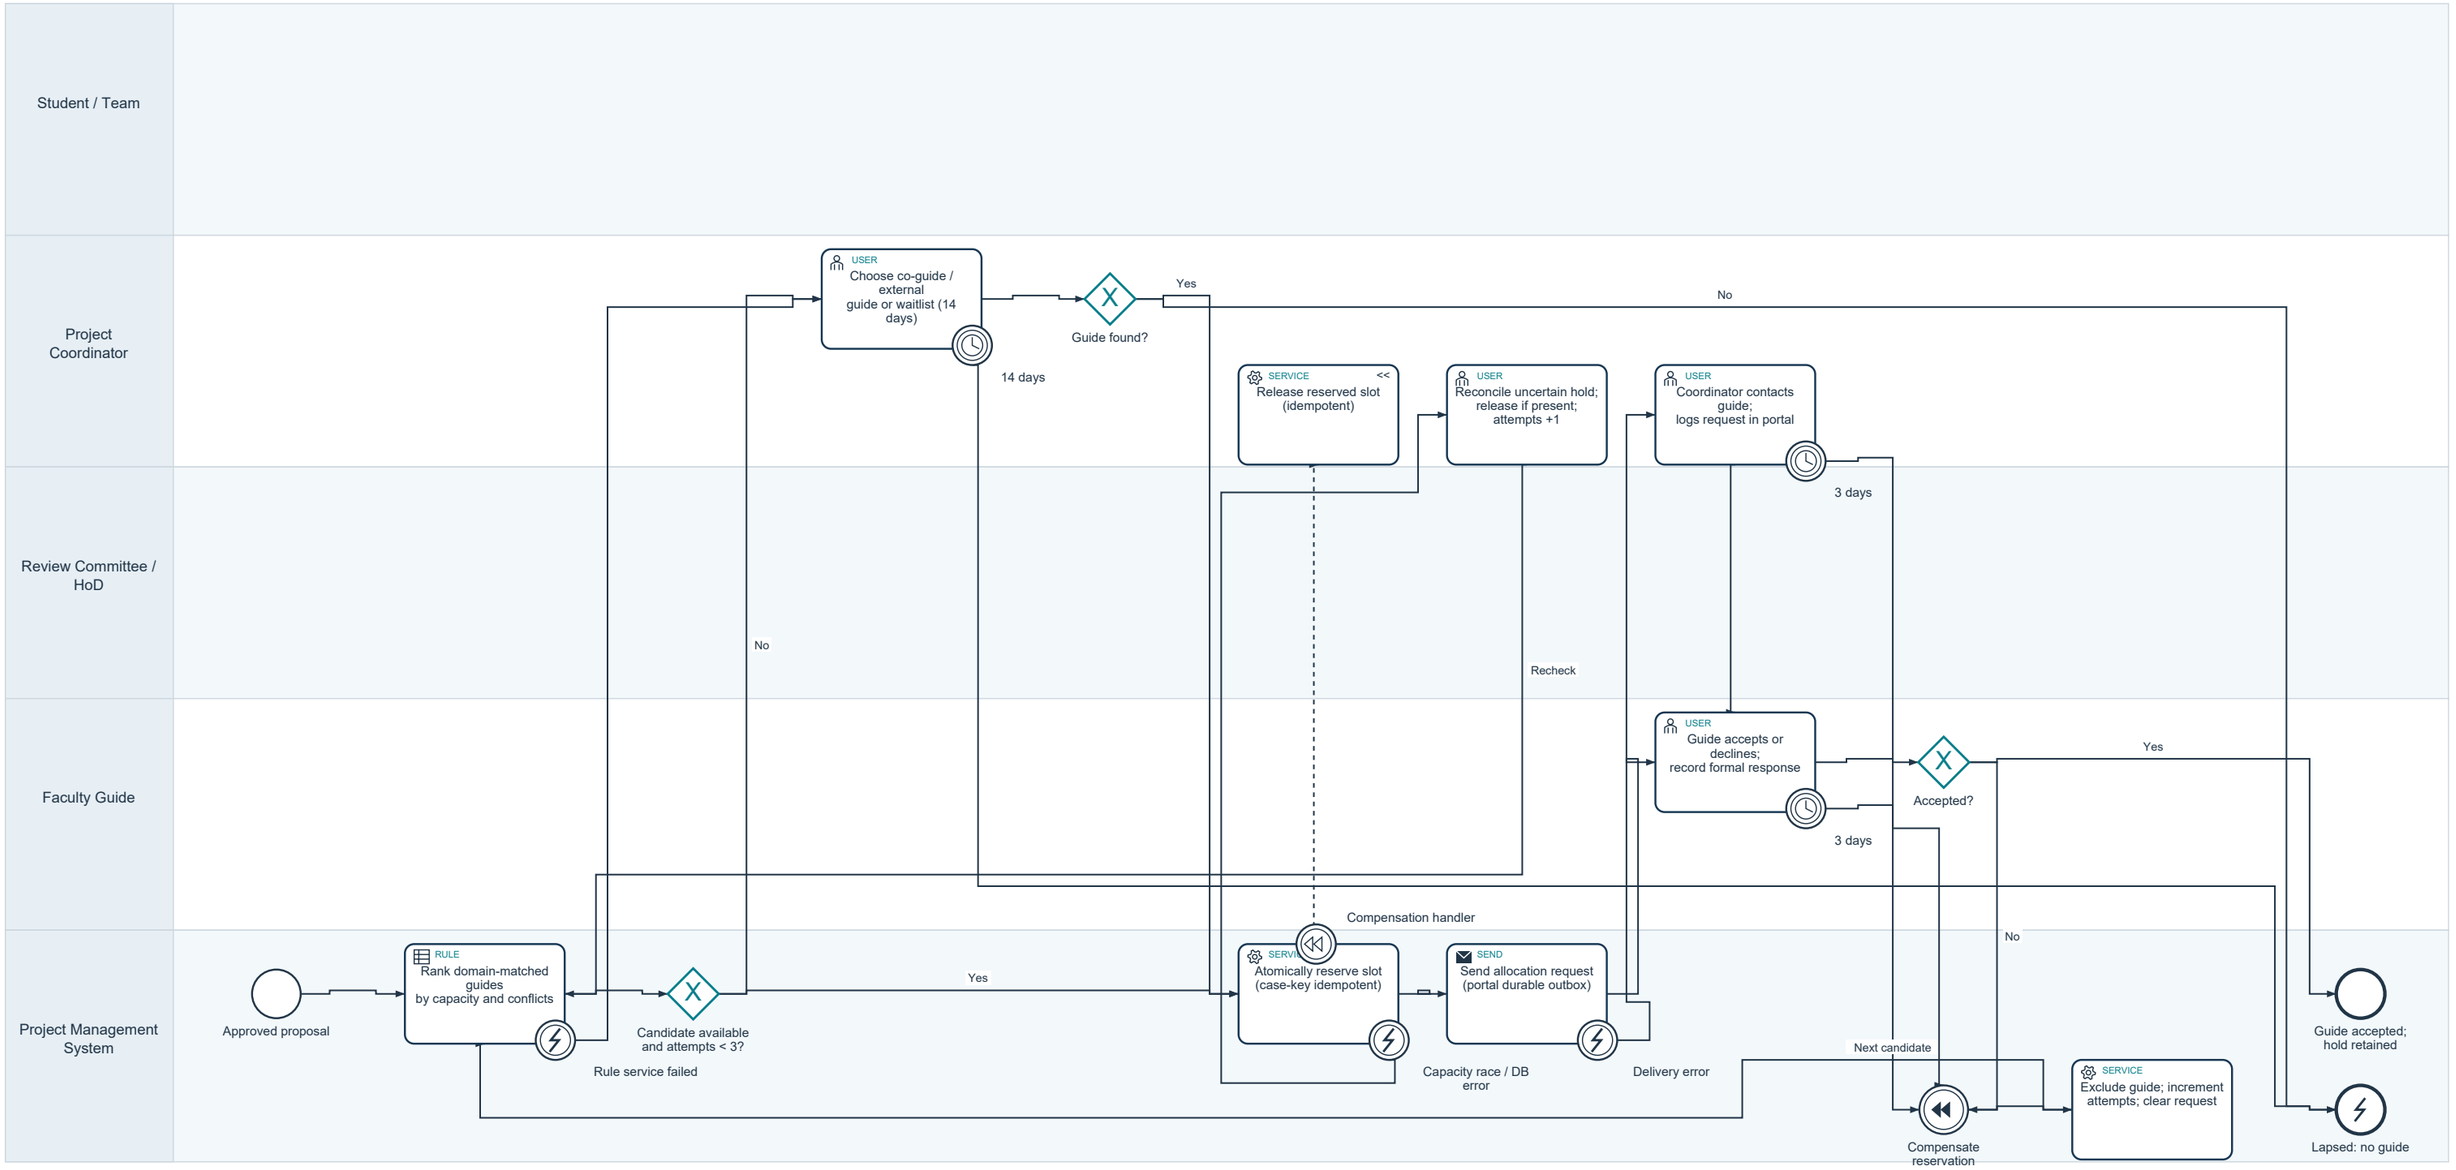

BPMN 2.0 | One department process, five responsibility lanes | Policy values are modelling assumptions

X = exclusive decision + = parallel split/join Double circle = intermediate/boundary Lightning = error << = compensation

07 | Guide allocation, capacity and compensation

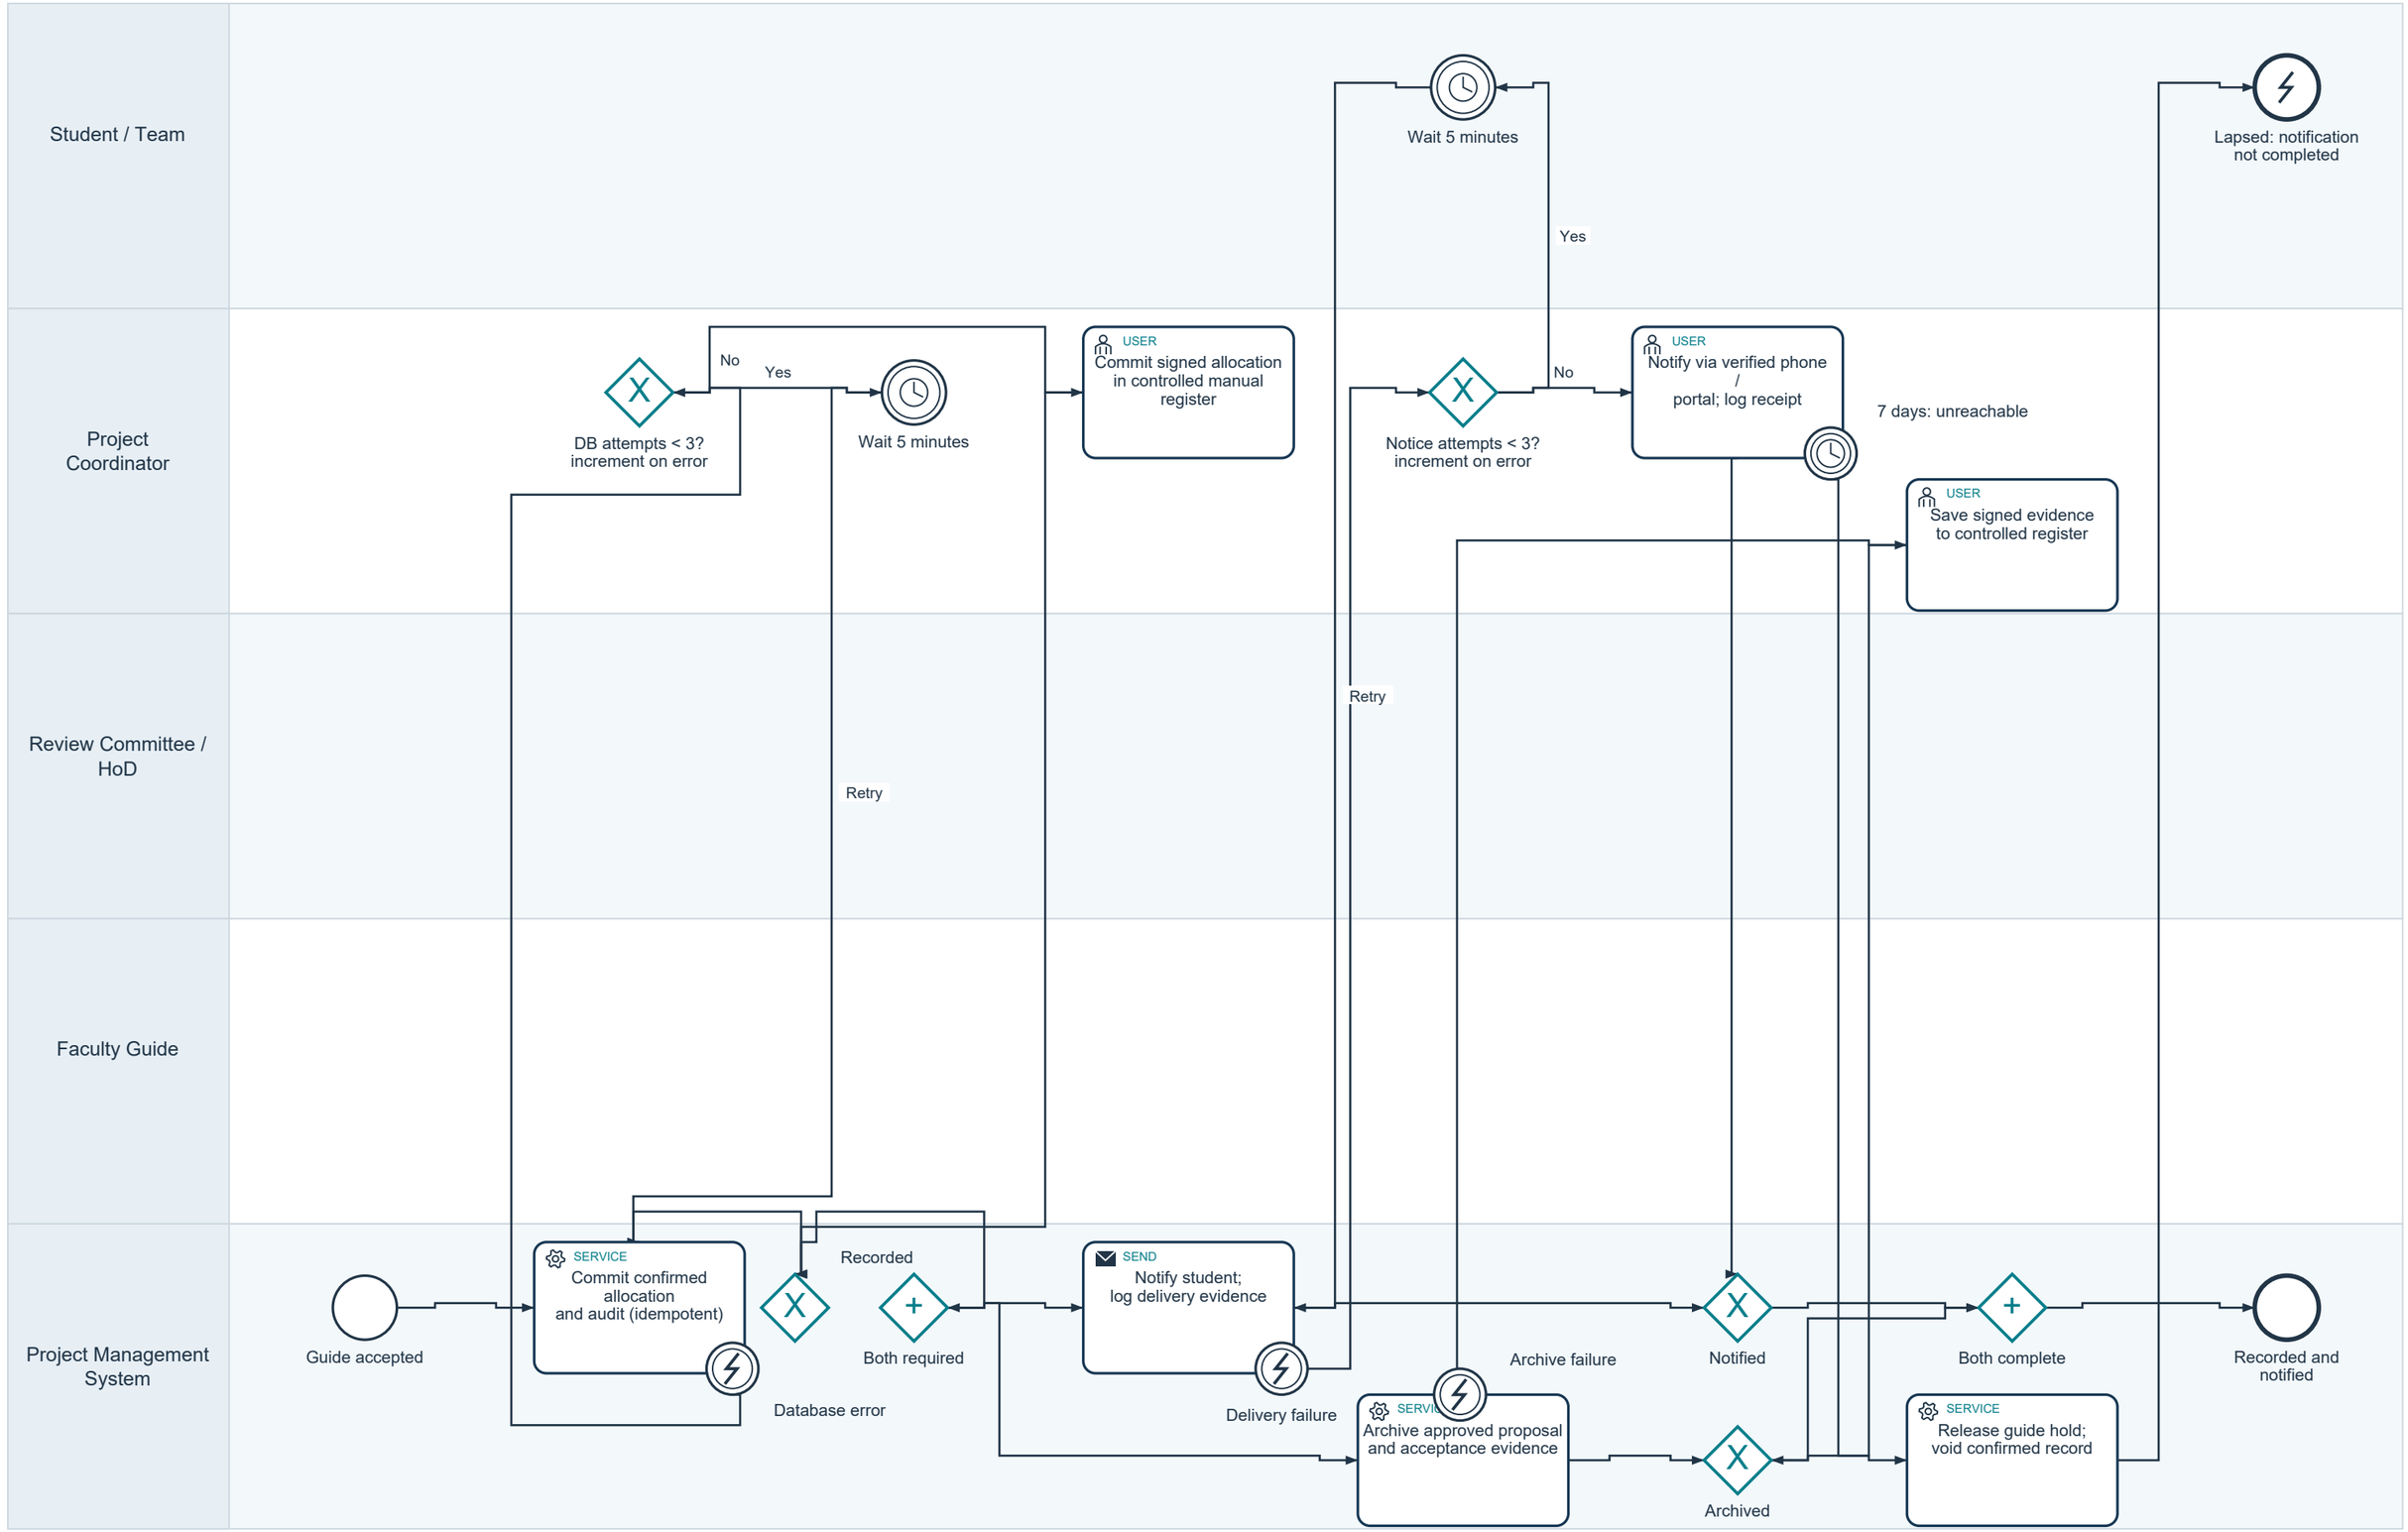

BPMN 2.0 | One department process, five responsibility lanes | Policy values are modelling assumptions

X = exclusive decision + = parallel split/join Double circle = intermediate/boundary Lightning = error << = compensation

08 | Durable recording, notification and fallback

BPMN 2.0 | One department process, five responsibility lanes | Policy values are modelling assumptions

X = exclusive decision + = parallel split/join Double circle = intermediate/boundary Lightning = error << = compensation
